## Summary

Computer Science undergraduate with strong foundations in Data Structures and Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, and DBMS. Builds scalable backend systems, REST APIs, and AI-powered applications using C++, Python, and JavaScript, focusing on writing efficient, maintainable, and production-ready software.

## Technical Skills

**Languages:** C++, Python, JavaScript

**Core Computer Science:** Data Structures, Algorithms, Object-Oriented Programming, Operating Systems, DBMS, Computer Networks

**Software Engineering:** Object-Oriented Design, REST APIs, MVC Architecture, Debugging, Version Control

**Backend:** Node.js, Express.js

**Frontend:** React.js, Tailwind CSS

**Databases:** MongoDB, MySQL, Redis

**Tools:** Git, GitHub, Docker, Linux, Postman

**Security:** JWT Authentication, bcrypt, Role-Based Access Control (RBAC)

## Experience

**Machine Learning Intern** | [Certificate](#) 

**Jan 2026 – Mar 2026**

*Infosys Springboard*

*Remote, India*

- Developed a modular machine learning pipeline in Python to predict football player transfer values using **10,000+** historical match records.
- Engineered **10+** predictive features from player statistics, improving predictive performance and feature relevance.
- Trained and benchmarked Linear Regression and XGBoost models, achieving an R-squared score of **0.97**.

## Projects

**DocMind** | *LangChain, Mistral AI, ChromaDB, Streamlit*

[GitHub](#)  | [Live](#) 

- Built a Retrieval-Augmented Generation (RAG) application that enables users to upload PDF and TXT documents and receive context-aware answers in under **5** seconds.
- Designed an end-to-end pipeline using LangChain, Mistral AI embeddings, ChromaDB, and MMR search, surfacing the top **4** most relevant document chunks using semantic similarity search.
- Delivered an interactive Streamlit interface supporting semantic search across **16** indexed document chunks for real-time question-answering.

**InternSetu** | *Node.js, Gemini API, Multer, pdf-parse*

[GitHub](#)  | [Live](#) 

- Architected an AI-powered recommendation engine that analyzes resumes and maps candidates to **20+** relevant internship opportunities.
- Automated a resume processing pipeline using pdf-parse and Gemini API, cutting manual data-extraction time by an estimated **80%**.
- Formulated a ranking algorithm to evaluate candidate-to-role alignment, improving recommendation relevance for **10+** test profiles.

**Lumina** | *MERN Stack, Groq API, LLaMA-3*

[GitHub](#)  | [Live](#) 

- Built a secure AI-powered mental health platform with **3** distinct user roles (Students, Counselors, and Administrators), each with RBAC-protected dashboards and APIs.
- Developed an appointment booking system with **25** daily counselor slots, including conflict detection.
- Implemented JWT authentication and bcrypt hashing with **10** salt rounds, securing **20+** REST API endpoints across auth, appointment, admin, chatbot, and community modules.
- Integrated the Groq LLaMA-3 API with a context window of **10** messages to power real-time, AI-powered conversational support for platform users.

## Achievements

- Solved **500+** Data Structures and Algorithms problems across arrays, linked lists, trees, graphs, recursion, dynamic programming, and hashing on [LeetCode](#), [GeeksforGeeks](#), and [CodeChef](#).
- Completed **Introduction to Generative AI** (Google Cloud, via Coursera) with a **100%** grade, covering the fundamentals of Generative AI and its applications. | [Link](#)
- Earned the **Google Cybersecurity Professional Certificate** (Coursera), gaining practical exposure to network security, threat detection, and incident response. | [Link](#)

## Education

**Heritage Institute of Technology**

*Bachelor of Technology in Computer Science and Engineering (IoT and CSBT) | CGPA: 8.9 / 10*

**2023 – 2027**

*Kolkata, India*
